

Minuteman[®] Attachments

Turn Your Skid-Steer Loader Into A Full Crew

Minuteman® Attachments Turn Your

A skid-steer loader equipped with a front bucket is a great time and labor saver. Add Minuteman® attachments to your Liberty or other skid-steer loaders, however, and they become so much more. Easy on/easy off Minuteman attachments, with the Versa-Tach™ quick-couple, 2-pin universal mounting system turn your skid-steer loader into a full crew all by itself.

All Minuteman skid-steer loader attachments are constructed of high-grade steel for extra life and durability and feature a rugged Dura-Coat™ finish to resist corrosion in a neutral gray color that matches virtually all other brands of skid-steer loaders.

1. Fronthoe

Whether you're digging trenches for drain tiles, cable or plumbing, nothing does it more cleanly and precisely than the Minuteman fronthoe attachment. The 12-inch-wide bucket digs down to six feet. All functions are performed from the loader seat using the same controls as other tools, and the universal mounting system and quick-connect hydraulics make mounting a breeze.

2. Backfill Auger

It's never been easier to backfill and cover trenches you've excavated to bury everything from pipes to wiring conduit or cable. The durable Minuteman backfill auger is 72 inches wide and 22 inches in diameter to make quick work of the longest trenches. It features a direct-drive motor and manual depth adjustment that lets you work above or below the grade of your trench. Textured, nonslip treads on the top of the auger housing enhance operator safety. It's a great tool for finishing what you started.

Skid-Steer Loader Into A Full Crew

3. Power Rake

This versatile finishing tool has a variety of uses from breaking up and leveling rough soil to dethatching existing sod or creating beds for ornamentals and flowers. It features an internally mounted direct-drive motor, carbide-tipped teeth and parallel linkage to follow ground contours. Parallel linkage can be locked into a fixed position, if desired. It also has front caster wheels with infinite vertical height adjustment. With its 6-foot working width and angle adjustment (left or right), it's also perfect for windrowing rocks or debris. Hydraulic angle adjustment is also available as an option. Standard end plates can also be attached to the front or rear for added box blade action, or conveniently stored on the unit.

4. Utility Buckets

Minuteman heavy-duty steel buckets are the most traditional of skid-steer attachments and with good reason, because of the versatility they offer in lifting and movement of materials. You can choose buckets in a variety of widths and in standard height or low-profile design. They also have grated steps on the top of the bucket for enhanced operator safety.

5. Auger

Use the Minuteman auger to dig perfectly straight and symmetrical holes up to 48 inches deep for posts or small trees and shrubs. The auger is available in multiple sizes with replaceable soil or concrete bits and is powered by a durable motor with speed control from 0 to 120 RPM. The Versa-Tach™ universal mounting system and quick-connect hydraulic couplers make on/off easy and convenient.

6. Grapple Fork

Grapples and forked buckets with grapples allow for easy pickup and handling of debris, brush and other hard-to-control materials from landscape and construction sites. The hydraulically controlled grapple fork is easy to operate and securely holds materials in the bucket during movement. Industry-standard hydraulic and Versa-Tach™ attachments make changeover to another tool a snap.

7. Pallet Fork

There's no quicker, easier or convenient means of moving heavy objects or loaded pallets around the shop or warehouse than with a Minuteman pallet fork. The durable, hardened steel tines are extra long at 48 inches, and they're width-adjustable from eight to 48 inches for maximum lifting flexibility and stability.
