

Double Your Seed Filling Speed

Pick up your seed filling speed and be two places at once with the added productivity and convenience of a wireless remote for your Seed Runner Tender. Just unlatch the conveyor from transport, swing into position, aim the downspout and take over with the remote from anywhere within 100'.

Receiving Unit

Door Opening Control

The wireless remote is easy to use and controls these features:

- Starts/Stops Engine
- Controls Engine/Unloading Speed
- Conveyor on/off
- Opens/Closes Doors
- Raises/Lowers Conveyor
- Emergency off switch

A second, deluxe remote for the Seed Runner is also available and controls the auger swing for even greater convenience.

When using the Seed Runner to fill itself, the flow of the loading vehicle can easily be monitored, while maintaining remote control of the Seed Runner operation.

Hand-Held Wireless Remote

The remote control is constructed from weather-resistant, heavy-duty, impact-resistant plastic to withstand harsh conditions. The large buttons are labelled for easy operation, even while wearing work gloves. Available as a factory-installed option or as a do-it-yourself installation on Seed Runners equipped with an electric start engine. Complete package includes all hydraulic hoses, cylinders, gates, transmitter, receiver and electrical wiring.

See your Unverferth Seed Runner dealer for complete details about doubling your seed filling speed with your new Seed Runner tender!
